Codebook

File	Description	Range
climate0205-allop.csv	Alliance/opposition data. Names of the respondents are in the row labels; names of alters rated by respondents are in the column labels. This matrix denotes whether an actor states about another actor that their joint policy goals are in opposition (-1), compatible (+1), or mutually neutral (0).	Minimum: -1. Maximum: 1.
climate0205-collab.csv	Collaboration network data. Names of the respondents are in the row labels; names of alters rated by respondents are in the column labels. This matrix denotes whether an actor maintains collaboration ties with another actor (1) or not (0).	Minimum: 0. Maximum: 1.
climate0205-committee.csv	Policy forum affiliation data. Committee names are in the column labels; actor names are in the row labels. This matrix denotes whether an actor is a member of a policy forum (= 1) or not (= 0).	Minimum: 0. Maximum: 1.
climate0205-dm.csv	A binary vector indicating whether an actor has formal decision-making power (1) or not (0).	Minimum: 0. Maximum: 1.
climate0205-prefdist.csv	Preference distance between row actors and column actors. This measure is computed as the Manhattan distance over actors' preferences on multiple key policy issues. The distance matrix is part of the original study (see note below).	Minimum: 0. Maximum: 0.98.
climate0205-rep.csv	Influence attribution data. This matrix indicates whether a row actor considers the column actor to be particularly influential (1) or not (0).	Minimum: 0. Maximum: 1.
climate0205-type.csv	Two categorical variables indicating the actor type of the respondent. The first variable (type3) is a broad categorization into private actors, public actors, and NGOs/associations. The second variable (party5) is a narrower classification into government actors, NGOs, scientific actors, political parties, and private actors.	(Categorical variable.)

This dataset was collected by Karin Ingold and is available at http://dx.doi.org/10.7910/DVN/27427.

More information can be found in the original study: Ingold, Karin M. 2008. Les mécanismes de décision: Le cas de la politique climatique Suisse. Zurich: Ruegger Verlag.

All actor names were anonymized by the original author.
